

Case Study

OBIEE Implementation

Client

- Casino Gaming Machines & Devices
- Location: Chicago, IL

Project Scope

- Oracle Business Intelligence (OBIEE) Implementation

Project Overview

ennVee partnered with the client to complete an "Out-of-Box" implementation of OBIEE 11g HR Analytics with minimal customization. The HR Analytics implementation needed to allow the client to extract additional source DFF's (Descriptive Flexfields).

Solution

The ennVee BI team successfully configured all OBIEE components and developed and implemented custom DFF extract. Additionally, problem ETL's underwent performance tuning, which enabled us to complete the Fit-Gap Analysis for the client's 90+ existing reports in their Human Resources operations.

Business Benefits

The project was executed smoothly and provided the client greater dexterity in extracting data related to HR analytics. To ensure an effective knowledge transfer and mitigate any future need to hire outside consultants, we also provided power user training in RPD, Informatica 9.0.1, Answers, and DAC.
