

**ORACLE®**  
E-BUSINESS SUITE

**KEY FEATURES**

- Automatically remediates 80% of all custom objects for compliance with R12.2
- Automated assessment including organization and tracking of all customizations
- Identify missing/suspect objects
- Pick and choose what to remediate
- Assign or retire custom objects
- Integrity Check (internal control process)
- To-be objects validation process
- Increased effectiveness of technical teams

**KEY BENEFITS**

- 80% reduction in manual effort
- 30% reduction in preparatory tasks
- 70% reduction in downtime
- 55% reduction in development time, cost, and complexity
- 30% reduction in overall upgrade timeline
- Mitigate risks associated with manual remediation and migration
- Increased agility during cutover including less outages and a reduction of 4-5 hours in overall cutover time
- Reduced consulting spend with automation
- Reduced re-work during SIT

**RELATED SERVICES**

- R12.2 Upgrades & Implementations
- Project Planning and Management
- Application Maintenance & Support
- Application DBA Support
- Project Management
- Oracle Discoverer Migrations

## Oracle EBS R12.2 Upgrade Automation

Upgrading to Oracle E-Business Suite R12.2 requires manual remediation of all custom objects, and the management and execution of this process is the key to an efficient and successful upgrade. ennVee ennABLE is a custom-built, proprietary tool that we pair with our R12 upgrade consulting services to help organizations automatically remediate and migrate their Oracle EBS customizations to Release 12.2.

From start to finish, ennABLE identifies every customization, before generating a compliance report, and then extracting and itemizing each impacted custom object by complexity and type (Database, Setup, CEMLI/RICEFW). Each custom object is automatically remediated for compliance, and then migrated to the target R12.2 instance via a mass migration script. ennABLE also generates a MD.120 document with instructions to run the mass migration script and cutover post-migration.

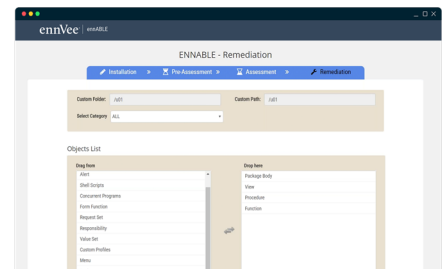

### Test Automation Toolkit

- Technical Objects
- Inbound/Outbound Connectivity
- Built-in Compliance Check
- One-time parameter capture
- Identify all or one Schema or Custom Top
- Validate new customizations developed in R12.2

### Automated Customization Remediation

ennABLE automatically remediates 80% of all custom Database, Setup, and CEMLI / RICEFW objects. Remediation is executed in your existing R12.x environment, before a code pack is generated and can be automatically migrated to the target R12.2 environment.

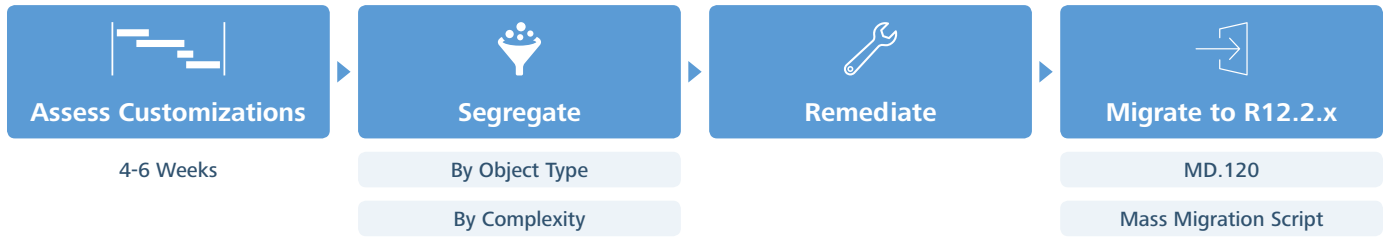

- Database**
- Custom Tables
  - Custom Sequences
  - Synonyms
  - Triggers
  - Functions
  - Indexes
  - Packages
  - Package Body
  - Procedures
  - Views
  - Materialized Views

- Setup**
- Concurrent Programs
  - Custom Profiles
  - Form Function
  - Look Up
  - Menu
  - Request Groups
  - Request Set
  - Responsibility
  - Users
  - Value Sets

- CEMLI / RICEFW**
- Reports
  - Forms

## R12.2 Upgrade Assessment

**How will your level of customization impact the R12.2 upgrade process?**

Our comprehensive upgrade assessment identifies all impacted customizations and changes required to help you reduce the cost, duration, and complexity of your R12.2 upgrade, and build a better project plan.

### Key Deliverables

- Complete list of all customizations, complexity, and upgrade impact
- R12.2 upgrade road map
- Compliance Report (Impact Assessment)
- Remediation effort estimate
- Inferences and Recommendations Report
- Proposal with timelines and pricing
