

NetSuite ERP Cloud

Integration, Development, & Managed Services

ORACLE® + NETSUITE

CORE EXPERTISE

- Application Management & Support
- SuiteCloud
 - Customization
 - Business Process Automation
 - Data Integration
- Custom-built solutions in NetSuite and associated systems that support business requirements and processes
- Translating business requirements into logical, component-based technical designs
- Integration
- Implementation
- Consulting & Staff Augmentation
- Strategy, Planning, & Assessment

FOOTPRINT

- Procurement
- Order Management
- SCM
- CRM
- Financial Management
- Application Performance Management
- Warehouse & Distribution

INTEGRATION TOOLS

- Dell Boomi
- Celigo
- Mulesoft
- Postman
- Eclipse

NetSuite-as-a-Strategic-Direction

NetSuite is a cloud-based suite of Enterprise Resource Planning (ERP) applications that help companies manage services like e-commerce, customer relationships, and accounting. ennVee's ERP background encompasses over 30 years of enterprise-wide implementations and roll-outs, starting with Oracle E-Business Suite. 2017 and beyond- Our NetSuite-certified consultants help businesses extend and integrate with other mission-critical applications, while ensuring that companies are prepared to pursue further growth in the Cloud. Our commitment to providing timely and versatile application managed services still remains the catalyst fueling our global team of hundreds of technology professionals.

Our global software engineering team is trained, tested, and certified across NetSuite's application portfolio. Our ERP expertise enables us to translate business requirements into logical, component-based technical designs, and build customized solutions in NetSuite and associated systems that support business requirements and processes. This, combined with our mastery of the Suitecloud Technology toolkit, ensures optimal customization, business process automation, and data integration solutions for our customers.

NetSuite Admin Solutions

Concise administration and user management is crucial and ensures that users are assigned the proper access to sensitive information and applications. We have built a strong data security and identity management practice around Oracle Access Management and E-Business Suite, and have extended these best practices for NetSuite application setups, configurations, security, data management, Performance, and maintenance.

Business Process Optimization

- Provide guidance on process execution across all functional and products
- Address business process queries
- Setup company entities/process/functionality
- Manage/design dashboards, saved search, Key Performance Indicators(KPI's), reports, centers, etc.

Security Management

- Manage/Create roles and provide user with required permissions
- Recommend/Suggest best practices to ensure user account and system security

NetSuite Enhancements

- Create/maintain custom elements (Sub-tabs, lists, fields, forms, records, etc.)
- Maintain Business workflows, existing integrations, SuiteScripts & create/Maintain SuiteBundles

POC

- Order to cash Cycle
- Procure to Pay cycle
- Advance Promotions
- RESTlet Webservices
- Token based Authentication
- Integration between NetSuite & Salesforce
- Integration between salesforce & NetSuite
- Integration between NetSuite & Tableau
- Integrated NetSuite with .NET Framework
- Integrated NetSuite with Power BI
- Integrating NetSuite with PHP
- Build Custom Application on top of NetSuite Application (Timesheet & IT Issue Tracker)
- Build CSV Data File Import Automation to NetSuite

APPLICATIONS

- Implementation
- Support
- Optimization
- Re-Engineering
- Migration

ADMIN

- User Creation and Management
- Custom Roles Creation and Modification to enforce security
- Application Setup
- Data Import and Data Integrity Assurance
- NetSuite Expansion via SuiteCloud
- Advisory Services for Data and System Protection
- Functional and Technical Resources and Assistance for New Releases
- Dashboard Development and Reporting
- Financial Management

ADVISORY

- Cloud Road Mapping
- Organization Change Management
- Health Check Assessments
- Quality Assurance
- Optimization & Continuous Improvement

Other Admin Solutions

- Manage data migration via import assistant
- Ensure Data integrity (Mass updates, Duplicate detection & data Merge)
- Manage email alerts, notifications & Audit trail
- Facilitate new upgrades and releases

NetSuite Consulting Services

ennVee's NetSuite Consulting Services are designed to augment the skills you already have in-house, allowing you to expand your knowledge base and the necessary level of expertise based on budget, requirements, or future roadmap.

ennVee's consulting services are fully-customizable and versatile — from full-scale implementation, to planning and deployment, customization, managed support, custom development, and integration with internal Oracle systems or Third Party applications (Salesforce, Quickbooks, Tableau, Power BI, etc.).

Clients choose ennVee when they need to manage skills gaps and fluctuating skill and staffing needs to meet rigorous project timelines. Our delivery method, governance, and oversight approach mitigates customer risk, while ensuring ace consulting services.

NetSuite Technical Solutions

We leverage NetSuite's Suitecloud technology toolkit to deliver cogent NetSuite solutions. Our technical competencies also focus on utilizing Suite Script to extend NetSuite beyond the capabilities provided through Suite Builder point-and-click customizations.

- **SuiteBuilder** point-and-click tools to enable users to customize NetSuite by adding custom fields, lists, record types, and forms.
- **SuiteScript**, an extension of the JavaScript APIs, to extend NetSuite in order to automate business processes or to build applications on top.
- **Managed Support** such as automating custom approval routing, applying validations, sending emails, creating related records, directing the end user to appropriate forms in the user interface, etc.
- **SuiteBundler** to rapidly deploy vertical solutions to multiple NetSuite accounts.
- **Integration using SuiteTalk** to expose NetSuite as a web service to simplify integration with legacy systems and third party vertical applications. SuiteTalk relies on industry standards (SOAP and XML) for data communication with external hosts.
