

Oracle E-Business Suite Implementation & Upgrade Services

ORACLE®
E-BUSINESS SUITE

We are Oracle Applications experts, who utilize “best practices” and a proven methodology to successfully guide our clients through their Oracle ERP implementation and upgrade initiatives.

ennVee has an extensive background of more than 25 years of experience helping clients overcome the challenges of ERP implementations and upgrades. We collaborate with each customer during all phases of the project, from initial planning to requirements definition, data conversions, to end-user training and all aspects in between.

Methodology

Our proven methodology will direct your implementation process from defining and mapping initial business requirements, to the design and setup of the architecture, data conversion, testing to production, and final training. We also offer ongoing support to help you transition from your legacy system to the new Oracle instance.

Utilizing established methodologies and Oracle EBS Subject Matter Expertise, we can quickly resolve issues and avert any potential obstacles that inhibit a seamless upgrade of your production system. We collaborate during all stages with each customer’s IT and business users to ensure succinct knowledge transfer and testing processes. After, we conclude with an efficient production cutover that minimizes risk and system downtime.

ennABLE

Customization Remediation & Migration Automation

Through automation, our proprietary ennABLE tool helps customers reduce 80% of the manual effort required to remediate and migrate custom objects when upgrading from EBS R12.x to R12.2. As a result, companies can reduce development time and cost, consulting spend, project timelines, and risk from manual human error. [Learn more >](#)

Customization Impact Assessment

ennVee’s comprehensive R12.2 upgrade assessment identifies and categorizes all of your customizations by object type and complexity. The assessment takes no more than six weeks and generates an upgrade road map (11i to R12.2 or R12.x to R12.2), a compliance report/ impact assessment, inferences and recommendations report, remediation estimate and comparison, and a proposal to execute the upgrade with timeline and pricing options.

Implementation Assistance

- Assessment, Strategy, and Planning
- Functional project team training
- Functional setup design and implementation assistance
- Technical team training
- Technical interfaces, conversions and customizations
- Database Administration
- End user procedure documentation (Tutor)
- End user training

FUNCTIONAL / TRAINING CONSULTING TEAMS

- Supply Chain, Advanced Supply Chain, & Value Chain Planning
- Manufacturing Execution
- Warehouse Management and Logistics
- Financial Management and Compliance
- Human Capital Management

TECHNICAL CONSULTING TEAMS

- Database Administration, Installation & Tuning
- Software & Related Hardware Installation
- Design
- Custom Development
- Workflow
- SQL (*Loader, *PLUS, *ReportWriter, *Reports)
- PL/SQL
- VI Editor
- ADI
- Unix
- Oracle Reports 6.0-12c
- Forms 6.0-12c
- Discoverer
- Oracle RDBMS 6.0, 7.x,8.x
- COBOL/Microfocus COBOL
- VSAM

IMPLEMENTATION OPTIONS

- Software-as-a-Service
- Accelerated, business flow-based
- Dual-shore co-located teams
- Coaching & mentoring

MAINTENANCE & SUPPORT

- Assessment, Strategy & Planning
- Application maintenance
- Support team training and mentoring
- Project team support
- End user training & support
- DBA mentoring and support

Implementation Services

Methodology

- Tailored to the specific requirements of each client's Oracle implementation or upgrade.
- Built upon ennVee's project engagement experience and expertise, fundamental implementation guidelines, and tasks and deliverable templates.
- Delivers a high degree of management control by dividing projects into six phases.
 - Each phase break represents a strategic point in the project where the business needs and project objectives are confirmed.
 - The end of each phase reflects the completion of project deliverables that is reviewed and approved by the project team.
 - This methodology ensures success by bringing time-tested, proven implementation techniques to every project.

Project Management

Initiation, Planning, Execution, and Completion

- Framework for consistently planning, estimating, controlling, and completing projects.
- During initiation, the project foundation and operational procedures are established by the customer and project manager.
- Collaboration with the client project team to build an initial implementation work plan, and identify the detailed project tasks, resource assignments, task estimates, and milestones as a baseline for measuring progress.
- Highlighting key project progress metrics to ensure progress is made according to plan.

Requirements Definition

Architecture and Business

Requirements

- Analyze and model each client's business processes to recommend an appropriate use of the Oracle Applications that will support these processes.
- Requirements that are not easily supported by the applications are identified and resolved accordingly. This exercise ensures that the applications can support the client's business needs without costly customization.

Solution Design

Architecture and Application Configuration, and Customization Design

- Assist in the development of detailed designs, taking into consideration organizational changes, process improvement, and re-engineering initiatives.
- Project team members create detailed narratives of process solutions developed during the operations analysis, which are subsequently analyzed to determine the most cost-effective alternatives that meet future business requirements.

Build and Test, Acceptance and Transition

- Working with the project team to configure and test the applications.
- Developing and testing custom reports, data conversions, interfaces, customizations, and extensions.

Production and Post-Production

- Cutover to Oracle Applications
- Monitor the system
- Support the users
- Document problems
- Apply fixes in a controlled manner
- Our focus on technology transfer to the operations team ensures future stability of the system.
