

Oracle Engineered Systems

Consulting & Managed Services

Demystify the Complexity of Next-Gen IT Infrastructure

ennVee engineered systems experts help your organization implement and migrate vital business applications, infrastructure, and technologies to an engineered system. We also provide weekend and off-hours support beyond implementation. ennVee's engineered systems offering is backed by a commitment to ensuring that minimal risk is encountered. This is accomplished by aligning to best practices for the entire process.

Bring your ES Strategy to Life

ennVee provides mission-critical services across the layers of adoption, deployment, maintenance, and management of your Oracle Engineered Systems. Understanding the challenges of scaling to accommodate data-intensive solutions, our services leverage the capabilities of Oracle's Database Machines and Appliances to help you cut costs, increase performance, and simplify your IT.

Whether you are preparing for an Exadata implementation or migration, creating a Disaster Recovery Plan, or need assistance in selecting the right engineered system, our expertise can help you accelerate ROI and transform faster.

Key Differentiators

- **Custom-built automation tools:** we use our proprietary TrendZ performance monitoring tool to holistically represent the health of your Engineered Systems so you can identify and resolve issues before they bring down the system. TrendZ provides ground-floor drill-downs, historic data trends, and actionable insights into storage, hardware, and capacity.
- **Track Record:** we are recognized for our infrastructure managed services engagements that satisfy and support both IT and business specific requirements.
- **No "one size fits all" model:** be it on-shore, off-shore, or a blend of both, we align to your needs to ensure reliable global coverage and agile delivery.
- **Experience:** ennVee is backed by almost three decades of experience providing database and infrastructure development, implementation, performance tuning, and support for organizations of all sizes.

Our Expertise

- Oracle Exadata
 - Configuration On-boarding
 - Facilitating Deployment
 - Security Configuration
 - Managed Services
 - On-Demand Support
 - Database or Systems Migration
- Cloud Deployments
 - Network Security Assessments
 - Implementation Best Practices
 - Recommendations
- Network and Security Reviews (New Deployment)
- 24x7 Intrusion Monitoring Help Desk
- Customer and End User training
- TrendZ Infrastructure monitoring Command Center

Supported Technologies

- Oracle Big Data Appliance
- Oracle Exalytics In-Memory Machine
- Oracle Exalogic Elastic Cloud
- Oracle Exadata Database Machine
- Oracle Database Appliance
