

## CASE STUDY

# Migrating from Oracle Discoverer to Microsoft SSRS

## OVERVIEW

The client is an internationally-recognized, private women's liberal arts college located in Massachusetts. As an IT-savvy institute, they use Oracle Discoverer for all MIS requirements. After Oracle stopped supporting Discoverer in mid-2017, they sought an optimal migration path to migrate its analytical reports to a more intuitive platform, ultimately choosing Microsoft SQL Server Reporting Services (MS SSRS) as its target platform.

Having already installed and used MS SSRS for years, the client avoided the need for a separate implementation project and additional user training. In this case, the three primary constraints were time, cost, and resources needed to migrate. The client's internal IT team did not have the availability to manually migrate from Discoverer to MS SSRS, and needed ennVee's help to automate the migration process.

## Solution Approach

Due to the constraints for both cost and time, we aimed to automate as much of the migration process as possible by utilizing our proprietary ennSight tool, which automatically identifies, assesses, and extracts all reports from Discoverer, including security and business rules.

To start, we conducted a comprehensive assessment of the client's Discoverer reporting environment. The assessment produced a detailed snap shot of all reports broken down by department, owner, duplicates, complexity of the SQL, and estimated effort required to migrate. This information helped the client determine which reports to migrate, sunset, and consolidate, and allowed its business users to scrub the list for any duplicates or obsolete reports. The final decision for what to migrate consisted of 500 essential reports covering four tracks, HRMS, FINANCE, FACULTY, and PAYRPT.

## CUSTOMER SNAP SHOT

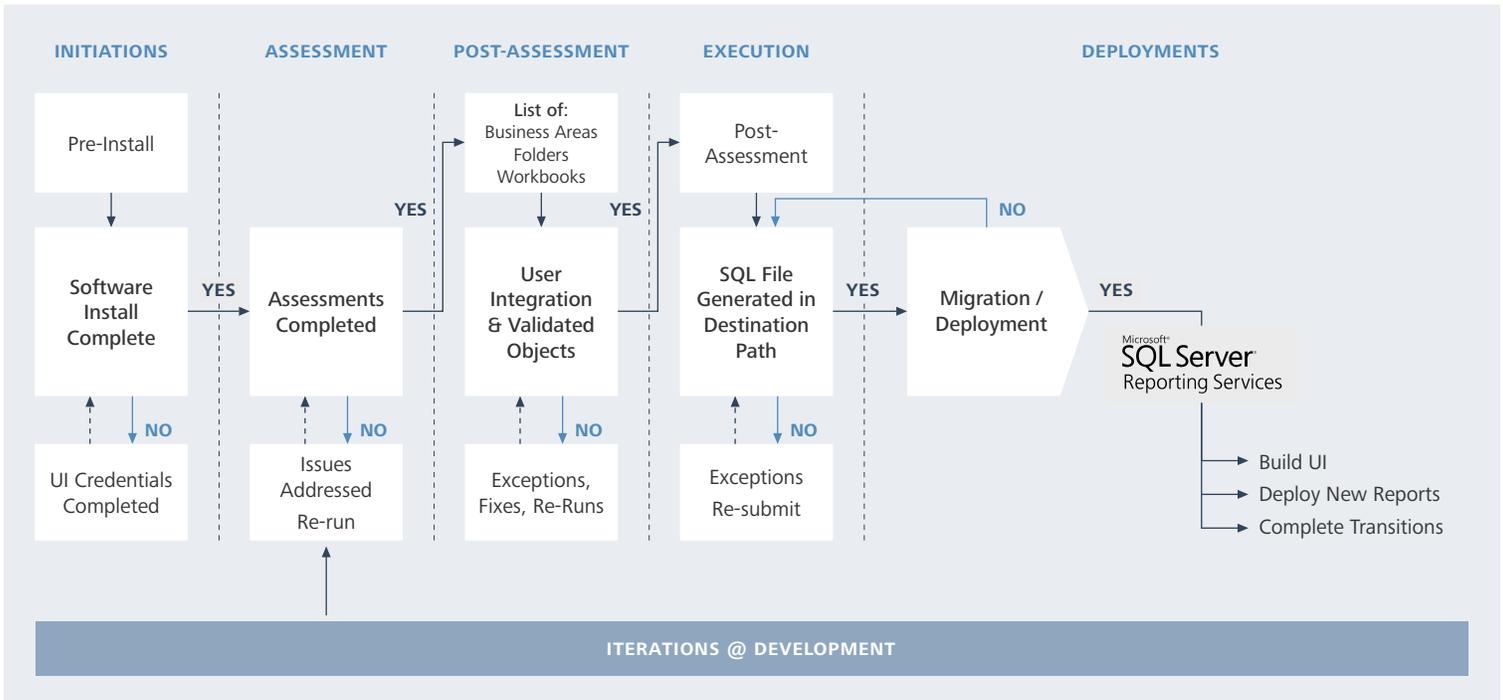

- Private women's liberal arts college
- Location: Massachusetts, USA
- 2300 students
- Annual endowment: ~\$2 billion USD

## PROJECT TOPOLOGY

- Oracle Discoverer
- ennSight tool
- Microsoft SQL Server Reporting Services (SSRS)

After, the ennVee team used ennSight to automatically extract the 500 identified reports from Discoverer, identifying all user roles and user assigned schema. Based on the extraction, each report was divided into one of three categories: Simple, Medium, or Complex. This helped to determine the complexity and effort required to convert and test the workbooks and reports. Post-extraction, we automatically migrated each report "as is" to expedite the migration process. As a result, the client was able to conduct a thorough review and decide whether any enhancements were required to the final output in SSRS. Finally, each report was unit tested before being deployed to the client's server.

**Discoverer to MS SSRS Migration Automation Process**

**Project Outcome**

All 500 Discoverer reports were successfully migrated to MS SSRS in eight weeks without any loss of data or disruptive rebuild. Automation helped the customer reduce the amount of complexity involved, as well as time, cost, and resources required to migrate. Rather than dedicate its internal staff to manually migrating the reports, the ennVee team handled and automated the process, affording the customer additional time to focus on strategic projects.

Additionally, the client's Discoverer users are able to create substantially more intuitive reports via the self-service MS SSRS reporting platform. They also have the flexibility to move reports into Microsoft Power BI to augment the analytics or visual effects. Overall, automation has afforded the college more time and resources for its strategic initiatives, while simultaneously migrating from Oracle Discoverer in just eight weeks.

**About ennVee**

ennVee is a global professional services firm that provides Oracle application management, business, and technology consulting services. Through automation-based application delivery, we help businesses accelerate project completion, reduce disruption, get it right the first time, and lower the cost to deliver tomorrow's solutions today.
