

Remote DBA Support

ennVee MDBA Expertise

- 24x7 Support (Off-Hours)
- Proactive Monitoring
- Routine Maintenance Automation
- Capacity Planning & Demand Forecasting
- Performance Tuning
- Backup and Recovery
- E-Business (EBS) / OTM Services
- EBS Administration & Monitoring
- Platform and Hardware Migrations
- Implementation and Upgrade
- Database and SysAdmin Consulting
- Architectural Assessments

Technologies

- TRENDZ Performance Monitoring
- Oracle Apps DBA Technologies
- Oracle Database 10g, 11g, 12c
- OID for SSO
- MS SQL
- Unix, AIX
- Exadata

Environments

- Single Node
- Multi Node
- RAC/ASM
- Data Guard
- SOA
- OBIEE/Essbase
- OAM/IDM

We help mold your database environment into a potent source of corporate value

Maintaining mission-critical systems and avoiding downtime is as imperative as ever. System performance monitoring, tuning, administration, and support are crucial and any hiccup can have an unprecedented effect on the business.

Companies of all sizes are becoming leaner as they continue to expand globally or through mergers and acquisitions, which often means that internal employees, who are responsible for managing and maintaining the infrastructure environment, are also simultaneously engaged in multiple projects. It can be difficult to balance maintenance and innovation (new projects), which is why many companies have turned to a third party provider for support. Providing organizations with an alternative method of database management significantly reduces costs, while improving database quality and performance.

High Availability | Real Application Clusters (RAC)

We help you design, plan, and install a highly available Oracle system. Using Oracle RAC, we create a centralized, consolidated data environment that enables you to utilize your Oracle investment more effectively. Increased streamlining and availability via RAC drives ROI and reduces TCO, maintenance fees, and cost savings in hardware.

Capacity Planning | Demand Forecasting

From basic sizing and capacity preparation to advanced in-depth planning for systems, we can provide on-site or remote assistance for capacity planning. ennVee's product knowledge for modeling and planning can be a strong asset to your business in this area.

Performance Tuning

ennVee has almost three decades of Oracle-specific tuning experience and we can often reduce response times to a fraction of their pre-tuned states. We can tune a whole system or focus on a slow-running aspect. Whether the problem is CPU usage, latch contention, an I/O bottleneck, or an Oracle bug, we have the know-how to solve it.

Health Checks

Our packaged health assessment is engineered to help you demystify and maximize your mission-critical systems. We offer a breadth of assessments from system-wide, to one-day consultations for existing set-ups, and a detailed management summary of recommendations.
