

MuleSoft

Seamless Integration and Development Services

Welcome to the World of APIs

Cost-effective and guaranteed to streamline integration end-to-end.
No frills.

MuleSoft is a lightweight Java-based enterprise service bus (ESB) and integration platform that allows developers to connect applications together quickly and easily, enabling them to exchange data. With more and more applications migrating to the cloud, businesses are looking for robust and cost-effective methods to connect their business applications. MuleSoft is the leader in API led connectivity, providing faster and seamless integration, light weight and scalable solutions align with your Digital Business Strategy.

- lacking an all-in-one solution that is transparent, judicious, and encourages collaboration.
- the capability to coordinate global projects across multiple geographic locations.
- the agility to make informed decisions via real-time analytics and performance reporting.
- the need for mobility and social interaction across portfolios and projects.
- the need for integration with financial, procurement, and other backoffice systems in order to connect projects with strategies and delivering to exceed business objectives.

Started with SOA, now we're here

We are an implementer and partner for several our manufacturing customers. Our experts design and implement RAML APIs enforcing state of the art security features. Along with API development, we help our customers migrate from Oracle SOA or any legacy integration tool to MuleSoft. From out-of-the-box Oracle SOA services like Oracle Transportation Management (OTM) to custom integration solutions between Oracle EBS, Workday, Salesforce, Microsoft Dynamics, Service Now At Your Service (AYS), we do it all.

Best-of-breed Enterprise Application Integration

We are aligned to both Oracle and MuleSoft and firmly believe that its use pertains to the customer's IT environment, objectives, and constraints. In some cases, Oracle SOA and its licensing costs may be too expensive, and in other cases, MuleSoft may not be able to accomplish the customer's required integration.

We believe that specializing in both areas allows our customers to benefit from a multi-layered approach that takes into consideration both sides of the proposed solution. Let's start by asking, "What are your constraints and what do you want to accomplish?"

Our Offering

- Consulting
- Migration
- Security
- API Management
- Continuous Integration/
Continuous Deployment (CI/CD)
- Web Services (REST, SOAP)
- SQL Development
- Java Development Services

Technologies

- CloudHub
- API Manager
- Mule ESB
- Runtime Manager
- Anypoint Studio
- MUnit
- Maven
- GitHub

Certifications

- Integration & API (RAML Design)
- API Design (RAML 0.8)
- Solution Design
